

# In-silico model of lifetime trajectories of dairy cows

**Commonly used acronym:** INSILICOW

Created on: 28-01-2020 - Last modified on: 04-03-2020

## Organisation

**Name of the organisation** Katholieke Universiteit Leuven (KUL)

**Department** Department of Biosystems

**Country** Belgium

**Geographical Area** Flemish Region

**Name of the organisation** Institut national de la recherche agronomique (INRAE)

**Department** MoSAR

**Country** France

## SCOPE OF THE METHOD

<b>The Method relates to</b>	Animal health
<b>The Method is situated in</b>	Basic Research, Translational - Applied Research
<b>Type of method</b>	In silico

## DESCRIPTION

### Method keywords

dairy cow  
white-box model  
lifetime trajectory  
reproduction  
milk yield  
modelling

simulation

### **Scientific area keywords**

Animal science

statistical modelling

### **Method description**

This white-box model uses energy partitioning throughout the lifetime of dairy animals (growth, lactation, gestation, ...) to simulate reproduction performance, lifetime length, production performance etc. The method is developed by dr. Olivier Martin at INRAE, MoSAR, Paris.

### **Lab equipment**

You need the model codes to work with them.

### **Method status**

History of use

Published in peer reviewed journal

## **PROS, CONS & FUTURE POTENTIAL**

### **Advantages**

Replaces costly animal trials,

Accurate outcomes if you put the right parameters in.

### **Challenges**

Parameter choice and identifiability

### **Modifications**

Further extensions and improvements are in constant course of development

### **Future & Other applications**

Simulation studies in dairy cows, for example for studying resilience and perturbations in milk yield, or reproduction progesterone profiles
