

# P. knowlesi model to study P. vivax

Commonly used acronym: Pk model

Created on: 04-02-2022 - Last modified on: 08-02-2022

#### **Contact person**

Anna Rosanas-Urgell

## **Organisation**

Name of the organisation Institute of Tropical Medicine, Antwerp

Department department of Biomedical Sciences

Country Belgium

#### Partners and collaborations

Royal Veterinary College

## **SCOPE OF THE METHOD**

| The Method relates to                    | Human health       |
|--|--------------------|
| The Method is situated in                | Basic Research     |
| Type of method                           | In vitro - Ex vivo |
| Specify the type of cells/tissues/organs | red blood cells    |

#### **DESCRIPTION**

#### **Method keywords**

P. knowlesi

P.vivax

malaria

transgenics

CRISPR-Cas9

#### Scientific area keywords

malaria

drug-resistance

genetics

parasitology

#### **Method description**

The lack of a continuous *in vitro* culture system for P. vivax has made it impossible to genetically engineer P. vivax for mechanistic research studies. One alternative that is being used is the infection of non-human primates, however this is restricted to few laboratories across the world. An additional alternative is the use of P. knowlesi, a Plasmodium species closely related to P. vivax that can be cultured *in vitro*. P. knowlesi is the zoonotic monkey parasite, which was adapted to grow in human erythrocytes. The ease of genetic manipulation of P. knowlesi using CRISPR-Cas9 methodologies and its successful use as surrogate for homologous genes of P. vivax make it an ideal model to study the function of P. vivax genes. We use genetic-engineering strategies in a P. knowlesi transgenic model to replace P. knowlesi genes with P. vivax homologues using CRISPR-Cas9 technology.

#### Lab equipment

- L2 culture facilities;
- Genomic platforms.

#### **Method status**

Internally validated

Published in peer reviewed journal

# PROS, CONS & FUTURE POTENTIAL

## **Advantages**

P. knowlesi transgenic model / *in vitro* culture allows to investigate gene function of P. vivax as an alternative model to P. vivax infection of non-human primates.

#### **Challenges**

The expression of P. vivax genes in a P. knowlesi parasite.
