

## Real-time bioenergetics in human and animal cell lines

**Commonly used acronym:** respirometry

Created on: 14-02-2022 - Last modified on: 15-02-2022

### Contact person

Charlotte Grootaert

### Organisation

**Name of the organisation** Ghent University (UGent)

**Department** Food Technology, Safety and Health

**Country** Belgium

**Geographical Area** Flemish Region

## SCOPE OF THE METHOD

<b>The Method relates to</b>	Environment, Human health
<b>The Method is situated in</b>	Basic Research
<b>Type of method</b>	In vitro - Ex vivo
<b>Species from which cells/tissues/organs are derived</b>	Human-derived cell lines
<b>Type of cells/tissues/organs</b>	Intestine, liver, lung, immune system

## DESCRIPTION

### Method keywords

respirometry  
bioenergetics  
Metabolism  
mitochondrial respiration  
glycolysis

### Scientific area keywords

metabolism  
toxicity  
bioenergetics  
Drug metabolism

### Method description

Using respirometry (oxygen and pH, XF96 Analyzer), computer assisted cell analysis, and specific substrates and stressors, mitochondrial function and metabolic changes in a diverse set of cell lines can be measured. Relevant to study substrate preferences, acute and chronic effects of toxic substrates and contaminants, particles, as well as early events in the development of chronic diseases such as cancer and metabolic syndrome.

### **Lab equipment**

XF96 Analyzer Agilent

### **Method status**

History of use

Published in peer reviewed journal

## **PROS, CONS & FUTURE POTENTIAL**

### **Advantages**

On-line measurement on real cell systems early responses chronic responses strong support by the company.

### **Challenges**

- Variability;
- One provider relatively expensive consumables.

### **Modifications**

Optimisation for tissues instead of cells.

### **Future & Other applications**

Can be used in metabolic, cancer, toxicology and bioactive compounds research.
