

Real-time bioenergetics in human and animal cell lines

Commonly used acronym: respirometry

Created on: 14-02-2022 - Last modified on: 15-02-2022

SCOPE OF THE METHOD

| | |
|--|---|
| The Method relates to | Environment, Human health |
| The Method is situated in | Basic Research |
| Type of method | In vitro - Ex vivo |
| This method makes use of | Animal derived cells / tissues / organs |
| Species from which cells/tissues/organs are derived | Human-derived cell lines |
| Type of cells/tissues/organs | Intestine, liver, lung, immune system |

DESCRIPTION

Method keywords

respirometry

bioenergetics
Metabolism
mitochondrial respiration
glycolysis

Scientific area keywords

metabolism
toxicity
bioenergetics
Drug metabolism

Method description

Using respirometry (oxygen and pH, XF96 Analyzer), computer assisted cell analysis, and specific substrates and stressors, mitochondrial function and metabolic changes in a diverse set of cell lines can be measured. Relevant to study substrate preferences, acute and chronic effects of toxic substrates and contaminants, particles, as well as early events in the development of chronic diseases such as cancer and metabolic syndrome.

Lab equipment

XF96 Analyzer Agilent

Method status

History of use
Published in peer reviewed journal

PROS, CONS & FUTURE POTENTIAL

Advantages

On-line measurement on real cell systems early responses chronic responses strong support by the company.

Challenges

- Variability;
- One provider relatively expensive consumables.

Modifications

Optimisation for tissues instead of cells.

Future & Other applications

Can be used in metabolic, cancer, toxicology and bioactive compounds research.
