Organisation

Name of the organisation Ghent University (UGent)

Department Veterinary skillslab

Country Belgium

Geographical Area Flemish Region

SCOPE OF THE METHOD

The Method relates to	Animal health
The Method is situated in	Education and training
Type of method	Other: Dummy models and simulators

DESCRIPTION

Method keywords

veterinary medicine
simulator
skillslab training
dairy cow
milk sampling

Scientific area keywords

Veterinary education
clinical training

Method description

In the skillslab, dummy models and simulators are used for teaching various clinical skills. The veterinarians in training need to learn how to obtain a sterile milk sample from a cow. Although training on living animals is important, a part of the training process can be performed on a bovine commercial or home-made simulator in the skillslab.

Lab equipment

- ° Home-made low fidelity model: udder model
- ° Commercial high-fidelity models: <https://koeierij.nl/>

Method status

History of use
Internally validated

PROS, CONS & FUTURE POTENTIAL

Advantages

The use of educational animal models in a skillslab offers a number of significant advantages:

- ? Reduced use of laboratory animals and reduced discomfort for patients, as procedures can be practised on dummy models and simulators before performing them on a live animal.
- ? Teaching of clinical skills in a quiet and safe environment, reducing anxiety and stress for the veterinary student.
- ? Complex practical skills can be split into a number of small steps when practising them in the skillslab.

Challenges

High cost of models, clinical training on live animals needed as well. Often leakage of the teat, but replacement is possible.

Future & Other applications

Training for lab animal examination.
