

## Monotonic dose-response testing for Nanomaterial toxicity

**Commonly used acronym:** NMTox

Created on: 23-06-2023 - Last modified on: 22-08-2023

### Contact person

Geert Verheyen

### Organisation

**Name of the organisation** Thomas More University of Applied Sciences

**Department** RADIUS

**Country** Belgium

**Name of the organisation** University of Hasselt (UHasselt)

**Department** Centrum voor Statistiek

**Country** Belgium

## SCOPE OF THE METHOD

<b>The Method relates to</b>	Animal health, Human health
<b>The Method is situated in</b>	Basic Research, Translational - Applied Research
<b>Type of method</b>	In silico

## DESCRIPTION

### Method keywords

data exploration

dose response

monotonic trend

### Scientific area keywords

nanomaterials

### Method description

NMTox is an R-software package and a Shiny app that can be used to explore and subset large datasets and can identify and test for monotonic dose responses. The package was developed within the NanoInformaTIX project where a platform is developed that aims to predict nanomaterial toxicity.

### Method status

Internally validated

## PROS, CONS & FUTURE POTENTIAL

### Advantages

Versatile tool to be used for several applications.

### Challenges

Learning curve if the R-package is used.
