

Bioinformatics

Created on: 26-02-2024 - Last modified on: 11-03-2024

SCOPE OF THE METHOD

The Method relates to	Animal health, Environment, Human health, Other: Food & agriculture
The Method is situated in	Basic Research, Regulatory use - Routine production, Translational - Applied Research
Type of method	In silico
This method makes use of	Animal derived cells / tissues / organs

DESCRIPTION

Method keywords

Microbiome analysis

Data analysis

therapeutic

antibody

Scientific area keywords

Data Science
bioinformatics
in silico
statistical modelling

Method description

Through leveraging our combined computational and biological knowledge, we have proven expertise supporting clients in:

- (1) Developing and applying a range of statistical methods tailored to specific problem settings in both clinical and non-clinical datasets,
 - (2) Integrating multi-omics data with other data sources, both in-house and in public databanks,
 - (3) Developing bioinformatics proof-of-concept studies on client in-house platforms to support R&D activities *In silico* characterization of organisms, genetic material, and peptides,
 - (4) Mining publicly available data to screen for target, drug or biomarker candidates *in silico*,
 - (5) Explorative analysis of large datasets, from quality control to result visualization,
 - (6) Detection of structural variants from whole genome sequencing data,
 - (7) Performing structural bioinformatics analyses, such as functional site prediction ...
- And more.

Lab equipment

Method status

History of use

Internally validated

Published in peer reviewed journal

Validated by an external party (e.g. OECD, EURL ECVAM,...)

Other remarks

We have proven experience working with biologicals, cell therapies, small molecules, and more, and we offer multiple bioinformatics approaches and software tools to help you get the most out of your biomedical data. To make sure you stay in full control of your results, we provide support throughout the analysis process and fully explain our data science approaches - there's no black box when you work with BioLizard.
