

Cellular / Slice electrophysiology

Created on: 30-08-2019 - Last modified on: 10-09-2019

SCOPE OF THE METHOD

Alternative method relates to	Human health
Alternative method is situated in	Basic Research
Type of alternative method	In vitro - Ex vivo
This method makes use of	Animal derived cells / tissues / organs
Species from which cells/tissues/organs are derived	Mice / Rat
Type of cells/tissues/organs	Brain / Neuronal cell

DESCRIPTION

Method keywords

Patch clamp

Field potential

Brain slice

Scientific area keywords

Electrophysiology

neuroscience

Physiology

Method description

In this method, it is possible to use active/viable animal or human brain slices / cells (normal or disease model) to study the effects of different drugs on brain cells (neuron or glia) in diverse brain region.

Lab equipment

Vibration isolation table with Faraday cage,
Signal amplifier,
Digitizer,
Micromanipulator,
IR-DIC Microscope,
Perfusion pump,
Glass pipette microforge.

Method status

History of use
Published in peer reviewed journal

PROS, CONS & FUTURE POTENTIAL

Advantages

Reduce animal use.
Any drugs can be tested before clinical studies.
Possibility of sharing same animal for different experiments depending on target brain regions.

Challenges

Require sophisticated instruments which are expensive.
Require long training before successful implementation.
